

Configurarea serverelor din DMZ

- Se vor configura serverele: DNS, EMAIL, FTP si HTTP
- Fiecare student va folosi numele sau pentru conturi (username si parole) si pentru inregistrari in serverul de DNS

Configure and test a DNS server:

Click on the desired server.

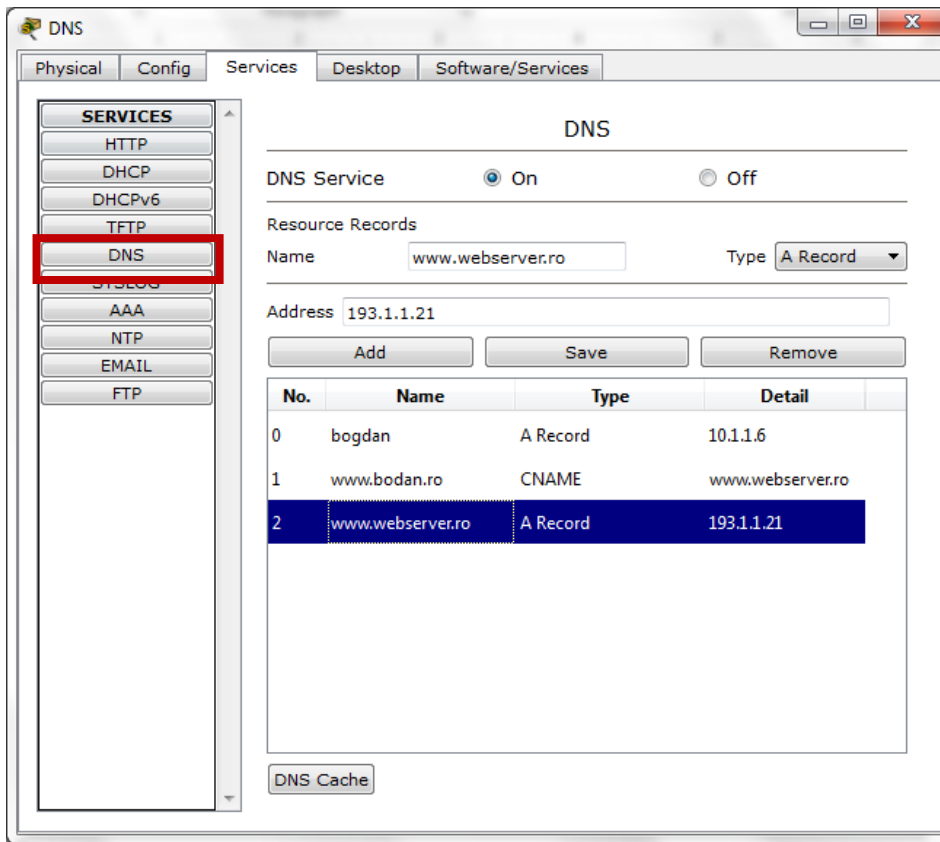

Select a service to configure: DNS

- All the devices should have a DNS server address (verify you have assigned an DNS address using either DHCP service or statically assign the address)

- Add entries (Name and address):
 - for example add the IP address of your HTTP server on the Address field and your name (webserverYourName) on the Name field; do the same with all the other servers

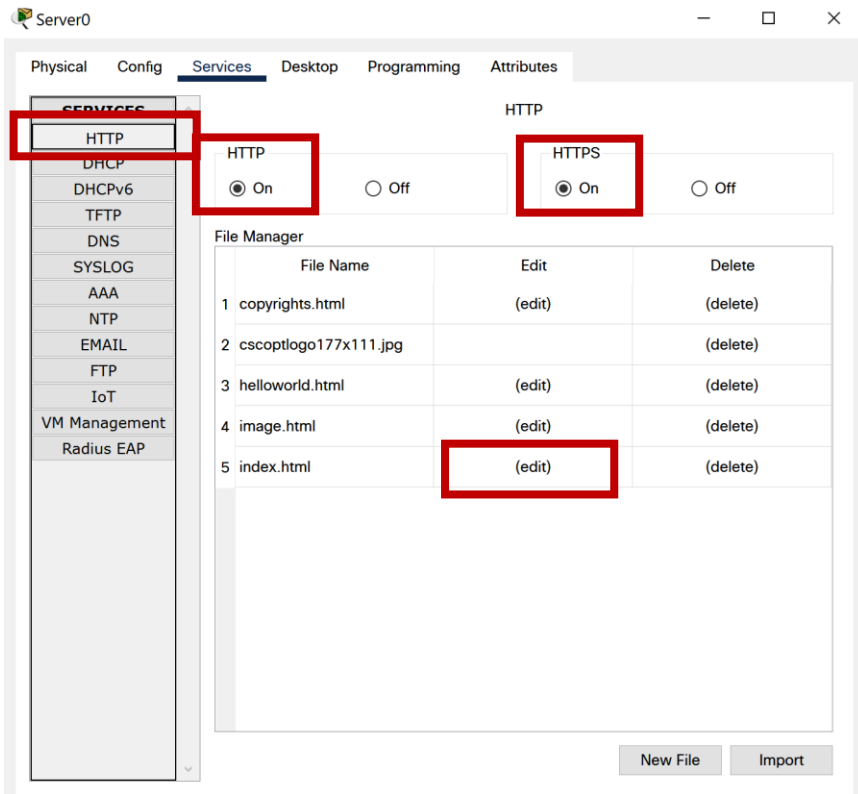

- c. Test the DNS service:
- Open command prompt on a network host (PC/laptop)
 - Enter the **nslookup** command
 - Test with a define Name or IP address

Configure and test **HTTP/HTTPS** services with a IP address and a Name:

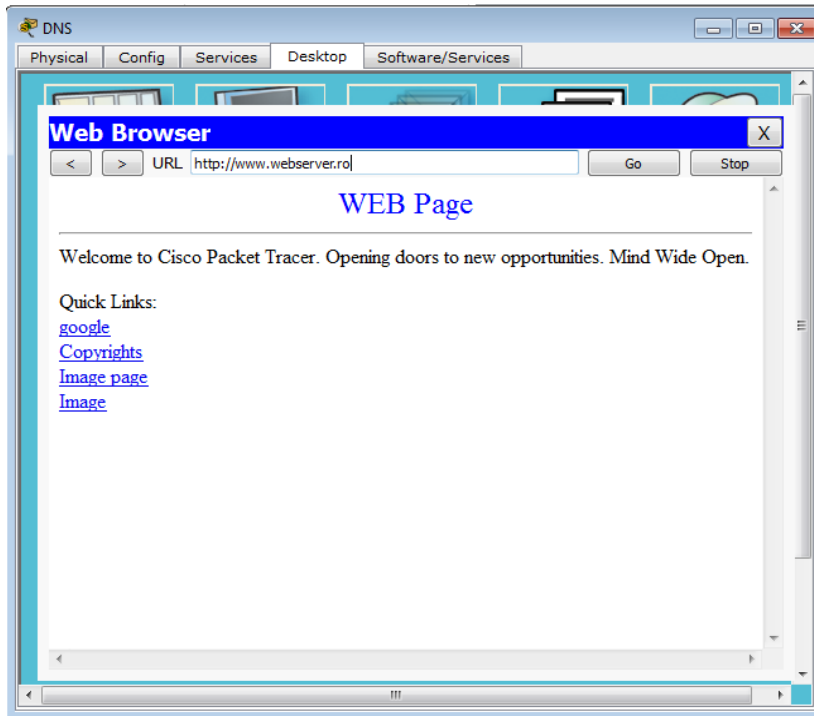

- a. Check the HTTP and HTTPS services are running on the server; modify the index.html Title to your OwnName

- b. Open a on a web browser on a network host (on a PC from the private network)
c. Connect to the HTTP server using an IP address

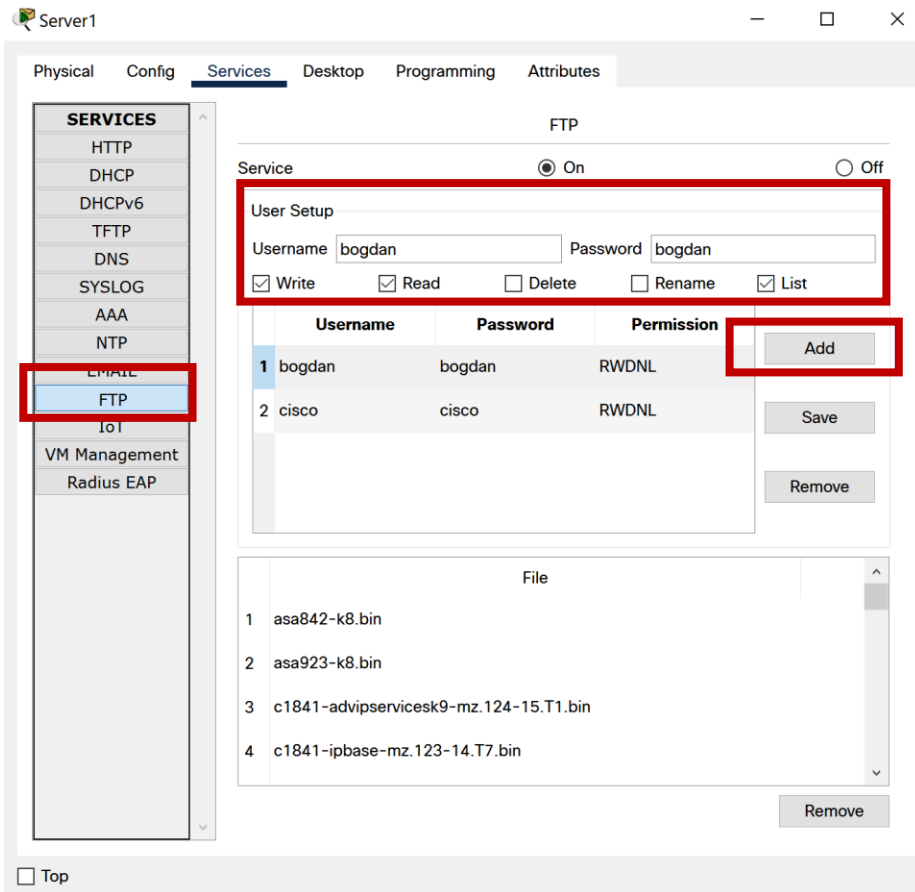

- d. Connect to the HTTP server using the Name (previously defined and mapped to an IP address in DNS)

Configure and test FTP services

- a. Create a new user (using your own name) with several access rights (WR/RD/DEL etc.)

- b. Test the FTP service (see picture below:
- Open command prompt on a network host (PC/laptop)
 - Enter the **ftp <FTP server IP address>** or **ftp < FTP server Name>** command
 - Enter the defined credentials (username and password)
 - Enter different commands (dir, get etc)

Command Prompt

```
C:\>ftp 210.2.2.67
Trying to connect...210.2.2.67
Connected to 210.2.2.67
220- Welcome to PT Ftp server
Username:bogdan
331- Username ok, need password
Password:
230- Logged in
(passive mode On)
ftp>dir

Listing /ftp directory from 210.2.2.67:
0   : asa842-k8.bin                    5571584

5   : c1900-universalk9-mz.SPA.155-3.M4a.bin 33591768
6   : c2600-advipservicesk9-mz.124-15.T1.bin 33591768
7   : c2600-i-mz.122-28.bin            5571584
8   : c2600-ipbasek9-mz.124-8.bin      13169700
9   : c2800nm-advipservicesk9-mz.124-15.T1.bin 50938004
10  : c2800nm-advipservicesk9-mz.151-4.M4.bin 33591768
11  : c2800nm-ipbase-mz.123-14.T7.bin  5571584
12  : c2800nm-ipbasek9-mz.124-8.bin    15522644
```

```
ftp>get asa842-k8.bin
```

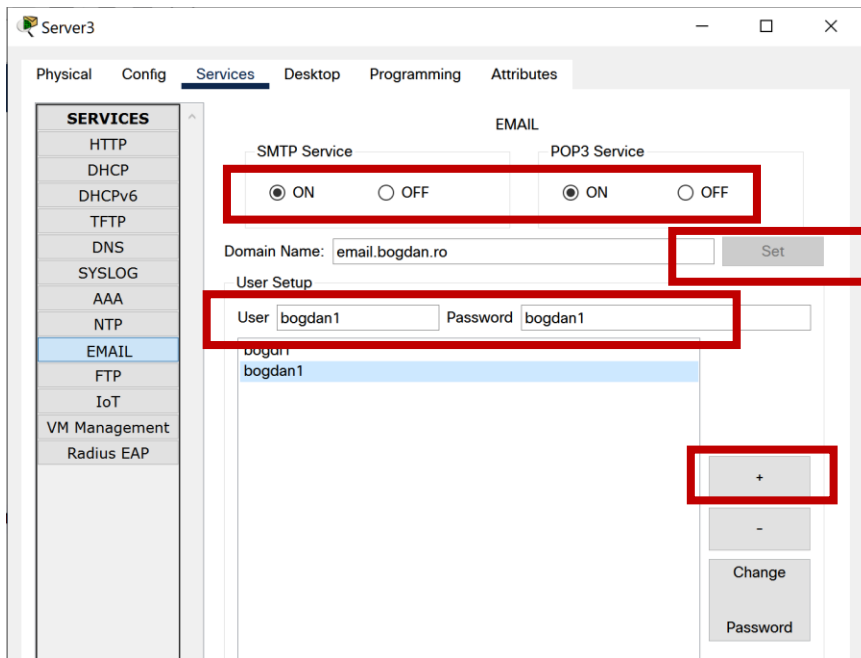

```
Reading file asa842-k8.bin from 210.2.2.67:
File transfer in progress...
```

```
[Transfer complete - 5571584 bytes]
```

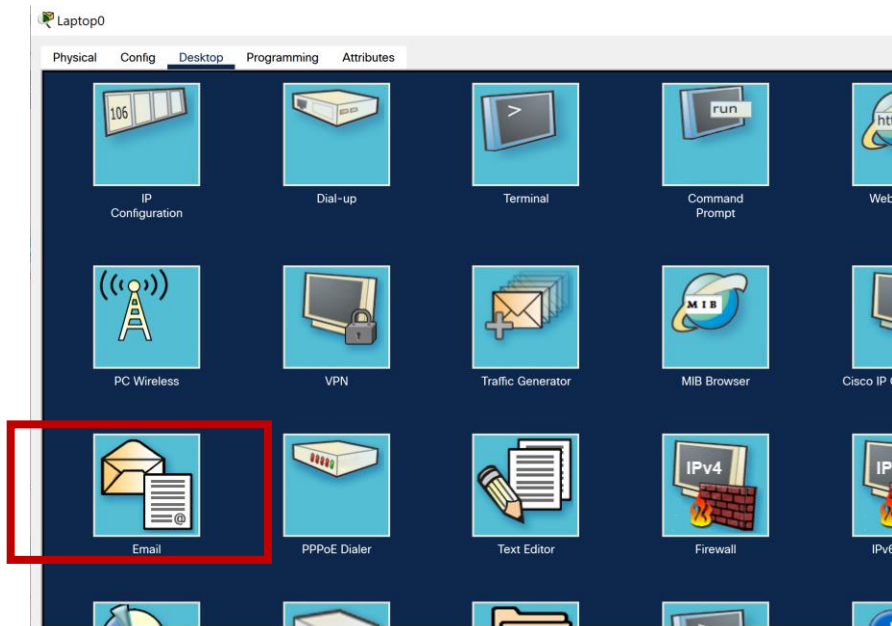

```
5571584 bytes copied in 17.908 secs (71287 bytes/sec)
```

Configure and test E-MAIL services

- a. For the Domain Name use the DNS name assigned to your Email server
- b. Create a new user (using your own name)

- c. Test the Email service (see pictures below):
 - v. Open the email app on several network hosts (PC/laptop)
 - vi. Enter the email configuration info
 - vii. Compose and send an email
 - viii. Verify it was sent/received successful
